REASONS FOR ALLOWANCE

The closest prior art Wengel et al (US 6,794,499) teaches general structure IIa in which one of the embodiments is a structure wherein R^{2*} and R^{4*} are bridged via an $-OCH_2CH_2-$ group, which is the same as the compound instantly claimed. Wengel does not provide an example wherein the said compound is made or any experimental results regarding its stability and activity. Wengel's structure IIa also reads on several different combinations for the substitutions. The Declaration filed by the applicants shows that the compounds as instantly claimed (containing the 2'-4'-O-ethylene bridge) are highly stable and resistant to nuclease activity. This is neither taught nor obvious from the teachings of the prior art.
